**IMMEDIATE RESPONSE
AT YOUR COMMAND!**

POWER CONVERTER

What is Sprint Booster?

Automobiles in the 21st century have replaced the more conventional throttle cable technology for an ECT (Electronic Throttle Control) that translates pedal travel into electronic signals in order to provide power to the wheels.

The ECT systems - also known as drive-by-wire (DBW) has the unfortunate downside of delayed throttle response and subdued acceleration, creating problems in certain circumstances such as up-hill starts, quick gear changes, overtaking, etc.

The Sprint Booster aims to overcome this throttle response delay for ECT - equipped vehicles, providing crisp on-tap acceleration at the driver's disposal.

SPRINT BOOSTER is an electronic device which is adapted behind the acceleration pedal

The installation is an easy process and does not require any electronic components of your car. (Fuel injection system)

SPRINT BOOSTER eliminates slow response of electronic throttles!

SPRINT BOOSTER improves acceleration!

SPRINT BOOSTER promotes safe overtaking!

SPRINT BOOSTER improves up-hill climbs!

Available for most car makes with electronic throttle control!

ALFA ROMEO, AUDI, BMW, CITROEN, FIAT, FORD, MERCEDES-SMART, MINI COOPER, MITSUBISHI, OPEL, PEUGEOT, PORSCHE, RENAULT SEAT, SKODA, TOYOTA, VW

Function

It is a device that improves acceleration by continuously measuring and converting the digital signal provided by the ECT's potentiometer, and providing the ECM (Electronic Control Module) with a new and altered signal.
